

PROJECT 7

Spiders

Goal

Children study the interesting features and behaviors of spiders and how they are beneficial to our ecosystem.

What

During the Spiders project, children study how spiders walk upside down and spin their sticky webs, and discover why spiders are important for the environment.

Why

A close investigation reveals a wondrous world of spider webs and diverse types of spiders.

Community

Children take a field trip to a local nature center to talk with an expert about spiders.

Family

Family members can suggest a field trip location, take part in a Gallery Walk event to view children's created spider models and informational posters about spiders, and support children's learning at home.
